Dear all,
I have done some upgrades in the pid correlation.

a) I have added the forward tof, the time is fine, the track length has still some problems. The info is stored in the usual TOF functions (the same of scitil)

b) now GetSttHits() gives not only the number of stt hits but also the number of FTS hits for forward tracks

c) There is a new function GetGemHits() to have the number of gem hits fired

Enjoy!
