Dear all,
I have troubles in compilation with my Mac. EvtGen does not compile due to some gfortran problem:

```
[ 45%] Built target EvtGen_exe_simpleEvtGenRO
[ 46%] Generating G__EvtGenDirectDict.cxx
Scanning dependencies of target EvtGenDirect
[ 46%] Building CXX object
pgenerators/EvtGenDirect/CMakeFiles/EvtGenDirect.dir/PndEvtGenDirect.cxx.o
[ 46%] Building CXX object
pgenerators/EvtGenDirect/CMakeFiles/EvtGenDirect.dir/G__EvtGenDirectDict.cxx.o
Linking CXX shared library ../../lib/libEvtGenDirect.so
ld: library not found for -lgfortran
clang: error: linker command failed with exit code 1 (use -v to see invocation)
make[2]: *** [lib/libEvtGenDirect.0.0.0.so] Error 1
make[1]: *** [pgenerators/EvtGenDirect/CMakeFiles/EvtGenDirect.dir/all] Error 2
make: *** [all] Error 2
```

Before the cmake updates everything was smooth. Could some mac expert take a look?

Hi Stefano,

could you run

```
make VERBOSE=1
```

and post the last lines of the output to see the command which results in the error.

Ciao

Florian

Have you tried to remove the standalone executables of EvtGen(simpleEvtGenRO...) from the CMakeLists.txt?

The problem is somehow related to the fortran compiler, i experienced something similar when using the intel fortran compiler.

Just try to run make -i, which continues making after the errors.

If thats the only error only the standalone executables of EvtGen are not build, which are not needed to run pandaroot.

Hi Stefano,

did you change anything in the build system?

Could you send me the CMakeLists.txt from pgenerators/EvtGenDirect.

Ciao

Florian

Hi, of course I did not change files, everything sits in the pandaroot trunk.

Here the link to the file.

Fixed in the old and in the new EvtGen packages.
