hi,
I am using the latest (today's) trunk in svn and generating 4 events as per attached runsim.C macro.
I get the crash shown in the attached runsim.log file. Please some expert (Mohammad ?) tell me what's wrong, thanks a lot

Gianluigi

File Attachments
1) runsim.C, downloaded 498 times
2) runsim.log, downloaded 488 times

.... in case you couldn't read the attached files, please find them in
http://www.pv.infn.it/~boca/panda/runsim.C and runsim.log

thanks Gianluigi

Dear Gianluigi,
You probably have already run the simulation with the old version of the code, updated the trunk, and want to run the simulation again.
Well, there has been so many changes in fairbase, that the params.root files are no longer compatible. You have 2 options:
1/ delete the MvdStt_Params.root,
2/ change the TString parOutput to something else,
and run again.

Did it help?

dear Radek,
yes, deleting the Params.root file and rerunning fixed the problem, thank you
Gianluigi
