Dear all,

I just want to inform you that there is a new tutorial wiki page online

<http://panda-wiki.gsi.de/cgi-bin/view/Computing/PandaRootRhoTutorial>

together with a new tutorial directory trunk/tutorials/rho. It is basically a clone of the apr13 tutorial adapted to the current rho syntax (RhoCandidate, RhoCandList, etc...) The tutorial is planned to be a 'always running' tutorial, which I will try to keep up-to-date and functioning all the time.

The analysis macro code has also been split according to the different topics like PID, combinatorics, truth matching, fitting, etc in order to have less confusing and more clear example code.

Please try and let me know, when something is not working.

Best regards,
Klaus
