Dear all,
I have updated my pandaroot trunk version and got following error while compiling,

CMake Error at CMakeLists.txt:34 (SetBasicVariables):
Unknown CMake command "SetBasicVariables".

-- Configuring incomplete, errors occurred!

Please suggest some solution.

Thank You.

Can you write the complete message, after you set the SIMPATH, when you type the cmake
../pandaroot command?

Dear Stefano,

Thank you for reply. Here is complete message after cmake,

```
CMAKE_Fortran_COMPILER full path: /usr/local/bin/gfortran
Fortran compiler: gfortran
Set BuildType DEBUG
--- Found a Mac OS X System 10.6
--- Found GNU compiler collection
--- Build Type: Debug
--- Compiler Flags: -m64
CMake Error at CMakeLists.txt:34 (SetBasicVariables):
  Unknown CMake command "SetBasicVariables".
```

-- Configuring incomplete, errors occurred!

Have you set properly your SIMPATH?
Can you do a

ls \$SIMPATH

?

This is content of my fairbuild,

ls \$SIMPATH
bin doc etc include lib man share

thank you.

Dear Stefano,
Now it is compiled. Look likes problem of some conflicts.
