

Dear all,

I am trying to do a simulation with Geant4 using trunk(today morning version...)  
Upto sim->dig should be fine.

At reconstruction, probably I have a trouble to load G4 library.  
During the initialization of FairGeane::Init(), I have seen the message  
"Loading Geant3 libraries ...", but I have used Geant4 for this simulation, why such messages  
are appeared?

And the end of reco process the simulation is crashed with following error.

Quote:

```
terminate called after throwing an instance of 'std::out_of_range'  
  what(): vector::_M_range_check
```

What is this?

Here is the full output from reco session during simulation.

Quote:

```

The Geant3 message is normal, since we use geane which is based on geant3. This is independent from the simulation, then also if you use geant4 it is fine.  
I have run a g4 simulation and I cannot see problems with the reco. Are you sure you did not mess something in your macros?  
Could you please upload your macros, modified so that so that one can reproduce your problem?

Hi, Stefano

If I try this code with apr13 release PADNArOOT version, then everything is fine. But with recent trunk version, I have still following error at reco part (rec.C).

Quote:

[INFO ] The number of entries in chain is 5  
terminate called after throwing an instance of 'std::out\_of\_range'  
what(): vector::\_M\_range\_check  
root [0] your simulation is crashed!!!!!!!!!!

In order to test and reproduce this error, copy all files to tmporal directory,  
then load build panda by . ./config.sh  
and finally just ./do\_simulation.sh

Thank you for your help.  
Donghee

In my computer your reco macro crashes, but if I run the macro/run/reco\_complete.C from the output of your sim+digi macros, it works.

I presume you have some problem in your reco macro, since it is different from the standard one I am not sure where the problem stays, maybe you should try to load the sim file and use the digi as friend (you do the opposite). Or take the standard reco macro.

Hi Stefano

If I turn off Mvd Riemann in reco.C, simulation for Geant4 is fine.

Quote:

```
PndMvdRiemannTrackFinderTask* mvdTrackFinder = new  
PndMvdRiemannTrackFinderTask();  
mvdTrackFinder->SetVerbose(iVerbose);  
mvdTrackFinder->SetMaxDist(0.05);  
mvdTrackFinder->SetPersistence(kFALSE);  
fRun->AddTask(mvdTrackFinder);
```

Thank you for your kind debugging...

I would like to close this session.

Best wishes,  
Donghee

The mvdriemann is not in the default reco macros anymore. However, I suppose Tobias should check what is going wrong there.
