hi,

i have recently started working on pandaroot and have installed it in my laptop but the problem is in my laptop only a wi-fi is working and wired connection or dongle does not work? & in my friend's laptop wired connection works but wi-fi does not.

i have also tried to solve the problem by re-installing the thing but does not work what to do???

From your message it is not clear what does not work.

If you have problem of connections, they are not problems of the software and we cannot help. Could you please be more precise?
