Dear all,
after the discussion at the yesterday SeeVogh meeting, since in the latest trunk there is a revised working version of the fast simulation framework, I would ask to all the people doing analysis to try their channel with the fast simulation, and to check the differences with the full reconstruction. This could be a good starting point for the activities which will be requested by the scrutiny group.

You can find a good documentation about the fast simulation to use at the following link:

https://panda-wiki.gsi.de/foswiki/pub/Computing/Minutes24March2014/Goetzen_FastSim_Mar2014.pdf

Please report in the forum the results you obtain.
