hi,
i am running jan14/macro/run/tdrct/npipi/run_ana_invariantmass_4pi_stt.c and i am getting
following error on running it for second time without any modification,i get another error

foram@linux-rp3e:~/panda/jan14/macro/run/tdrct/npipi> root run_ana_invariantmass_4pi_stt.C

```

Hi,

You are trying to run the analysis macro, that takes input from previous reconstruction stages, in particular from the pid output file.
This file should contain tree with several branches, among others: "PidChargedProbability", "PidNeutralProbability", and so on.

These branches are not found. There can be several reasons for that:
- there is no pid file
- there are no such branches in the pid file
- there is misspelling somewhere (file name, branch name?)

Please make sure you to check the above points.
The fix for your problem depends on knowing this things.

yours
radek

Those macros are obsolete. Please use the macros in macro/run, and not the ones in the subfolders.
