Subject: Access to geometry with the 13.12 tag
Posted by StefanoSpataro on Fri, 13 Jun 2014 09:40:13 GMT

Dear all,
some of you have noticed that the drawGeo.C macro does not work anymore since few months.
This is due to a movement of the TGeoManager from FairBaseParSet to FairGeoParSet in the last base tag.

I have updated the macro/run/drawGeo.C, now it is operational again, and you can use this code to access to the gGeoManager if needed.
.
