Hi,

I currently try to install the newest pandaroot trunk on my GSI PC (lxg0477) and like to use the external packages under /cvmfs/fairroot.gsi.de/fairsoft/jul14p3. Setting the SIMPATH to that location I get a crash during compilation of FairRoot (not pandaroot trunk!)

```
...  
/cvmfs/fairroot.gsi.de/fairsoft/jul14p3/include/boost/serialization/base_object.hpp:57: error:  
'boost::is_const::value' is not a type  
/cvmfs/fairroot.gsi.de/fairsoft/jul14p3/include/boost/serialization/base_object.hpp:57: error:  
expected ',', or '...' before '==' token  
/cvmfs/fairroot.gsi.de/fairsoft/jul14p3/include/boost/serialization/base_object.hpp:57: error: ISO  
C++ forbids declaration of 'static_assert' with no type  
make[2]: *** [base/CMakeFiles/Base.dir/steer/FairRadLenManager.cxx.o] Error 1  
make[1]: *** [base/CMakeFiles/Base.dir/all] Error 2  
make: *** [all] Error 2
```

With a personal installation of the external packages in my home (which I'd like to avoid due to quota limitations) it worked. Is there some boost problem/mismatch in the pre-installed packages, or how can I get around that error?

Best,  
Klaus

Hi Klaus,

Which FairRoot version you use?

Cheers,

Mohammad

Hi Klaus,

there should be no difference between the version on cvmfs and one which is installed on your machine. I will try to do a installation myself.

Ciao

Florian

Hi Mohammad,

git status gives '# On branch v-14.11'. Like written in Wiki I checked out with

```
git clone https://github.com/FairRootGroup/FairRoot.git
cd FairRoot
git checkout -b v-14.11 v-14.11
```

After the 'git checkout' I didn't happen much, only one line was printed - I basically don't know git at all, so perhaps I forgot something...

Best,  
Klaus

Hi all,

I sometimes have a problem with boost if I forget to call configure.sh

Cheers,

Tobias

Hi Klaus,

I can confirm your problem, but only on your machine. On other Squeeze machines the compilation doesn't show an error.

The real problem is at the beginning of errors

Quote:

/cvmfs/fairroot.gsi.de/fairsoft/jul14p3/include/boost/config.hpp:35:33: warning:  
/cvmfs/fairroot.gsi.de/fairsoft/jul14p3/include/boost/config/compiler/gcc.hpp is shorter than  
expected  
/cvmfs/fairroot.gsi.de/fairsoft/jul14p3/include/boost/config.hpp:44:31: warning:  
/cvmfs/fairroot.gsi.de/fairsoft/jul14p3/include/boost/config/stdlib/libstdc++.hpp is shorter than  
expected

For me it looks like there is a problem with the mount of cvmfs on your machine. I will discuss  
this issue tomorrow with our experts from the IT department.

Ciao

Florian

Hi Florian,

thanks a lot for looking into it! I'm however a bit worried, that only my PC has this problem. Is it  
possible that I somehow spoiled it with wrong environment variables?

Best,  
Klaus

Hi Klaus,

this has nothing to with environment variables. Simply the file on disk is broken.

Ciao

Hi Florian,

ok, I presume it will then be fixed soon?! Just curiosity: Why does this issue only appear on my machine, when it's an error in cvmfs?

Best,  
Klaus

Ok, resetting the cvmfs cache on my PC solved the problem.

Cheers,  
Klaus
