
Subject: [Fixed] PndMvdStripHitProducer undeclared function

Hello,

I just got an undefined reference when linking to the libMvd, and the following member function is not implemented.

```
/** Specify the branch & folder names for the I/O */  
void SetBranchNames(TString inBranchname, TString outBranchname, TString folderName);
```

Since we mostly have macros that use the shared libraries, these errors usually do not appear unless you link to that library from somewhere else. Maybe we can turn on -Wl,--no-undefined to avoid these kind of errors...

Cheers,

Stefan

I see that the current version still does not have this fixed? Could someone please add the following lines to the PndMvdStripHitProducer.cxx, since I do not have any write permissions in that directory .

```
void PndMvdStripHitProducer::SetBranchNames(TString inBranchname, TString  
outBranchname, TString folderName) {  
    fInBranchName = inBranchname;  
    fOutBranchName = outBranchname;  
    fFolderName = folderName;  
    SetInBranchId();  
}
```
