Dear All,

Recently I realized that the directory of the (former) default 'Prerequisites' and 'FairROOT' installations has been disappeared.

Formerly they were in the /cvmfs/fairroot.gsi.de which directory cannot be seen from the Prometheus cluster. The directory is present on the lx-pool, but I cannot have access it from the Prometheus.

Am I doing something wrong or the policy has been changed?

Best Regards,  
Karoly
