
Subject: [SOLVED] Diffs between r 13415 and current & developement help
Posted by [Mamen](#) on Wed, 28 Oct 2015 14:01:11 GMT

[View Forum Message](#) <> [Reply to Message](#)

Dear all,

Since some time I am working on doing simulations for the possibility of converting PANDA into a detector capable of measuring reaction products from a p + e collider (proposed Electron Nucleon Collider - ENC, using HESR and PANDA).

Some years ago, Donghee Kang developed some software for the same project, based on the current version of pandaroot at that time (i.e. r 13415) and my task would consist on taking what he did and try to adapt it to the current version of pandaroot now.

I could manage to take his installed and edited software to my working directory and make it (more or less) run, using the reaction $pe^- \rightarrow pe^- \gamma$ generated for three different cases (DVCS, BH and Interference of both).

In the last few weeks, when I finally started working intensively with pandaroot, I have encountered some problems:

1.- It seems that I cannot install without errors the revision 13415 from the svn repository anymore. So I copied what Donghee had in his directory and installed it to my working directory. However, I would like to install a clean revision 13415 of pandaroot to be able to compare the changes that Donghee did with what it was in the software at that time.

2.- Also I have no idea how can I find out what has changed (I don't need details, but in a first step just roughly) since that version to the current one, concerning geometry, reconstruction, tracking, pid...

Any help or ideas will be appreciated.

I would also like to point that I am new to the development branch of pandaroot, so I might need quite a lot of help to understand some things. So, please, be patient with me .

Thank you very much in advance!!!

Cheers,

Mamen.

Dear Mamen,

long time ago the management of the base packages was a bit different, and it is causing your problem in the installation.

In theory, you should do the following

- * go to the pandaroot folder
- * type "svn propedit svn:externals ."
- * edit all the "base" lines (all the lines not "genfit") adding "-r 13415" before "https://..." and

save -> "base -r 13415 https://..."
* type "svn update" from the pandaroot folder
* compile

This should link the base packages to the release 13415.

About differences, we are speaking about code of 2011, then tracking was not highly performant like now, there was no SciTil, GEMs were different as well as DIRC, no forward tracking, different beampipe, no EMC pid.

[View Forum Message](#) <> [Reply to Message](#)

Hello Stefano,

Thanks for your answer. However, I cannot edit the file you mention.
After typing the command you propose, I get the following:

```
-bash-4.1$ svn propedit svn:externals .  
svn: None of the environment variables SVN_EDITOR, VISUAL or EDITOR are set, and no  
'editor-cmd' run-time configuration option was found
```

How can I continue now?

Greetings,
Mamen.

P.S.: Donghee pointed out that I should install the version 11867, but I guess I should proceed in the same way...

[View Forum Message](#) <> [Reply to Message](#)

Which is the text editor you use usually? Emacs? vi? Then type:

```
export SVN_EDITOR=vi (or emacs, or whatever)
```

and try again.

[View Forum Message](#) <> [Reply to Message](#)

Hi again!

It took some time to do the update.
I did the following:

```
-bash-4.1$ svn propedit svn:externals .
```

edited this:

```
base      -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/base
generators -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/generators
geobase   -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/geobase
ora       -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/ora
parbase   -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/parbase
cmake     -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/cmake
geane     -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/geane
eventdisplay -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/eventdisplay
trackbase -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/trackbase
fairtools -r 11867 https://subversion.gsi.de/fairroot/fairbase/release/fairtools
genfit    -r 313 https://genfit.svn.sourceforge.net/svnroot/genfit/core
```

And did

svn update

in the pandaroot folder.

After some time downloading/updating files (with some connection problems in between) I got the following message:

```
Conflict for property 'svn:externals' discovered on ".
Select: (p) postpone, (df) diff-full, (e) edit,
        (s) show all options: p
```

I selected postpone from the options I was given.

After some more time downloading/updating stuff, I see that it is updating to revision 28714 (why, if I chose 11867?)

Updated to revision 28714.
Summary of conflicts:
Property conflicts: 1

Whatever, I continue anyhow with the compilation:

```
-bash-4.1$ cd
-bash-4.1$ cd buildpanda_v11867_may11/
-bash-4.1$ cmake ../pandaroot_v11867_may11/
-- NOT Found FAIRBASE
CMake Error at CMakeLists.txt:40 (MESSAGE):
  You did not define the environment variable FAIRROOTPATH which is needed to
  find FairRoot. Please set this variable and execute cmake again.
```

-- Configuring incomplete, errors occurred!

See also

"/data/work/kpha4/moraespi/PandaRoot/buildpanda_v11867_may11/CMakeFiles/CMakeOutput.log".

Without succeeding... (I thought I don't need the variable FAIRROOTPATH for an older version of the software).

Any more ideas??? I am not sure that I edited correctly the file you told me...

Thanks again in advance.

Cheers,
Mamen.

[View Forum Message](#) <> [Reply to Message](#)

You need to type:

```
svn update -r 11867
```

Sorry, I was misleading.

Are you sure it is not a problem of connection? Because I can see
<https://subversion.gsi.de/fairroot/fairbase/release/base> without any problem.

Subject: Re: Diffs between r 13415 and current & developement help
Posted by [Mamen](#) on Thu, 05 Nov 2015 15:09:46 GMT
[View Forum Message](#) <> [Reply to Message](#)

I am not 100% sure...

Every time I run svn update -r 11867 I get different packages updated...

However "parbaes" and "genfit" (and from the last one also some subdirectories) show always the error message:

svn: warning: Error handling externals definition for 'parbase':
svn: warning: OPTIONS of 'https://subversion.gsi.de/fairroot/fairbase/release/parbase': could not connect to server (https://subversion.gsi.de)

(.../...)

svn: warning: Error handling externals definition for 'genfit':
svn: warning: Repository moved permanently to 'https://svn.code.sf.net/p/genfit/code/core'; please relocate
svn: warning: Error handling externals definition for 'GenfitTools/trackrep/LSLtrackRep':

svn: warning: Error handling externals definition for 'GenfitTools/trackrep/GeaneTrackRep2':
svn: warning: Repository moved permanently to
'https://svn.code.sf.net/p/genfit/code/GeaneTrackRep2'; please relocate
svn: warning: Error handling externals definition for 'GenfitTools/trackrep/RKTrackRep':
svn: warning: Repository moved permanently to
'https://svn.code.sf.net/p/genfit/code/RKTrackRep'; please relocate
At revision 11867.

I've contacted our cluster-administration to investigate if it consist really of a network-connection problem. I still don't have an answer...

I'll sent an update when I know something new...

Thanks for your help.
Mamen

[View Forum Message](#) <> [Reply to Message](#)

You should to the propedit command in the trunk, and modify the genfit line using now:

<https://svn.code.sf.net/p/genfit/code/core>

Moreover, in GenfitTools/trackrep you have to do again the propedit command and modify all the lines with:

<https://svn.code.sf.net/p/genfit/code/LSLtrackRep>

Since the genfit repository has changed in the meantime. And then the svn update -r 11867 from pandaroot folder.
About the problems with the base packages, in theory they should work, the link should be the same.

Are you sure you want to use code 4 years old?

-bash-4.1$ make -j8
make: *** No targets specified and no makefile found. Stop.
```

About using such an old version of PandaRoot, I know it is not the best idea, but adapted software to the "Electron Nucleon Experiment" was done using that version, and the changed code which I have runs under that version... So I think I have no (many other) option(s)... (I kindly accept suggestions)

Next step would be to adapt what I have to the newest version of PandaRoot...

Can you do the usual:

```
svn propedit svn:externals .
```

There should be the line for GeaneTrackRep2:

```
GeaneTrackRep2 -r 400 https://svn.code.sf.net/p/genfit/code/trunk/GeaneTrackRep2
Is it there?
```

Hi! Again!

I added the line you propose doing svn propedit svn:externals in GenfitTools/trackrep/ inside

my pandaroot directory.

It looks now like this:

```
LSLtrackRep -r216 https://svn.code.sf.net/p/genfit/code/LSLtrackRep
GeaneTrackRep2 -r 400 https://svn.code.sf.net/p/genfit/code/trunk/GeaneTrackRep2
RKTrackRep -r313 https://svn.code.sf.net/p/genfit/code/LSLtrackRep
```

And it seems we went a step forward.

Now the command cmake complains about the following:

CMake Error at GenfitTools/trackrep/CMakeLists.txt:57 (add_library):
Cannot find source file:

RKTrackRep/RKTrackRep.cxx

Tried extensions .c .C .c++ .cc .cpp .cxx .m .M .mm .h .hh .h++ .hm .hpp
.hxx .in .txx

-- Build files have been written to: /data/work/kpha4/moraespi/PandaRoot/build_v11867-02

RKTrackRep -r313 https://svn.code.sf.net/p/genfit/code/LSLtrackRep

->

RKTrackRep -r313 https://svn.code.sf.net/p/genfit/code/RKTrackRep

Thank you! Thank you! Thank you!!

It finally worked!!
