Hello,

did anybody use the heavy ion beam (^{124}Xe , for example) to run the simulations?

With cylindrical (X, Y) profile or gauss-like?

It would be nice to have the script or a part of it.

I hope with activation of:

/R3B/phys/addPhysics elastic

/R3B/phys/addPhysics ion_inclxx

G4 will make the elastic scattering events.

Thanks, Oleg.

Dear Oleg,

I am aware only of simulations for background studies with ion beam, performed by Ken Miki. He indeed used ion_inclxx, and qqsp_bert (last for nuclear reactions).

He has prepared a detailed documentation in form of wiki page. Konstanze should know its location.

Best regards,
Dima

Dima,

do you know about this report/description?

Konstanze is out up to 22.08.

Oleg.

You have found it already, but I place it here for future reference:
