Dear all,

I am happy to announce that we just have created a new PandaRoot release feb17.
This is now the official release version for the day1 simulations and the last based on root5.

A more detailed list of changes will be distributed in the next days.

Cheers,

Tobias

Dear Tobias and all,
thank you very much for providing new official release for day1. I tried to make some tests
(with ppbar->e+e- at 1.7 GeV/c) but there are few things that I did not understand if they come
from my analysis code or from the version of PANDAROOT:

- 1- Peak of the reconstructed angle around 90° (Lab) (Fig.1, Fig2)
- 2-Deposit energy in the EMC at transition region between barrel and forward is zero (Fig3)

Macros are from "macro/day1/" of the feb17 release.

Thank you,

Alaa

Dear Alaa,

could you please start a new discussion/forum topic in the forum with the problem you have
observed and add the .dec-file you have used.

Cheers,

Tobias
