Dear all,

We did simulations of the channel $p\bar{p} \rightarrow e^+e^-$ (at 1.7 GeV/c) with the new release of PANDAROOT (feb17). We found problems with (or we did not understand) some reconstructed variables:

1- A Peak of the reconstructed angle around 90° (Lab) (Fig.1, Fig2)

2- Deposit energy in the EMC at the transition region between barrel and forward is zero (Fig3)

Macros are from "macro/day1/" of the feb17 release.

Decay file:

Decay pbarpSystem

1.0 e+ e- PHSP;

Enddecay

End

Thank you in advance for your help,

Alaa/Dmitry

Dear Alaa,

could you please also provide the macro you have used to generate your plots?

Cheers,

Tobias

Dear Tobias,
attached is the analysis macro I used where I fill the reconstructed variables in Ntuples.
Best regards,
Alaa

Dear Alaa,

could you also send please your complete set of macros you have used? Your naming scheme in s_ana_complete.C looks different than the standard one.

Cheers,

Tobias

Dear Tobias,
Here is the full set of macros.
Thank you,
Alaa
