Dear PandaRoot developers,

I am restructuring the tracking codes. Therefore I have created two new folders PndTrackers and PndPropagators. I will move all track finders/fitters and propagators into these two new folders within the next days.

So please update your repository regularly if you are working on one of the folders.

Cheers,

Tobias

Dear all,

the restructurization is finished (for the moment). You can find now all tracking code in PndTrackers and the helix propagator in PndPropagators.

In addition I renamed tracking (which contained Gianluigi's offline tracking code) into CentralTracking and I separated Lias secondary particle tracker into SecondariesTracker.

In principle everything should still work but if you encounter a problem do not hesitate to write to pandamine a bug report

Cheers,

Tobias
