Hello everyone,

I'm trying to run simulations with the new pandaroot release feb17p1 using the IdealTrackFinder.

I used the script jobsim_kronos.sh in pandaroot/macros/prod, where the macro prod_aod.C was used and a single line was modified:

```
//fRun->AddRecoTasks(kFALSE);  
fRun->AddRecoIdealTasks(kFALSE);
```

When I submit the job with the following command:

```
sbatch -a1-20 jobsim_kronos.sh d0sim 10 D0toKpi.dec 12. ana 10
```

the run crash with a segmentation break. I've attached the log file.

The IdealTrackFinder is working fine when I test it with the macros in pandaroot/macro/master/recoideal_complete.C

Anyone has any idea what is wrong?

Best regards,
Walter

Hi Walter,

the problem is that the ideal track finder is not able to run with the PID task at the same time. I have no clue, why this is the case but you can fix your problem by separating them into two independent macros as it is done in /macro/master.

Cheers,

Tobias

Hello Tobias,

thank you for your response.

I created a modified script `jobsim_complete.sh` for submitting jobs to kronos where four macros are called (`prod_sim`, `prod_dig`, `prod_rec` and `prod_pid`).

I also modified the `digi`, `reco` and `pid` macro slightly as they would crash otherwise...

```
//fRun->Run(0, nEvents); //removed this line  
fRun->Run(0);
```

Cheers,

Walter
