
Subject: FairSoft not compiling due to gfortran problems in mac OS

Posted by [Hector Alvarez Pol](#) on Mon, 17 Apr 2017 09:28:52 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hello everyone,

I have updated to macOS Sierra 10.12.4 (16E195) with XCode 8.3.1 (8E1000a).

Compiling FAIRSoft, either versions mar17 or present master, return with a problem compiling pythia6 (see the error at the end of the message or the complete output in the uploaded file).

The same error appears to me compiling ROOT when gfortran is needed (I was able to compile ROOT with -Dfortran=OFF option).

I have tested both ROOT and FAIRSoft with gfortran from the gcc installed by homebrew:

gcc version 6.3.0 (Homebrew GCC 6.3.0_1)

and compiling directly gcc from the gnu source, after removing the homebrew gcc:

```
fpvieira:~ hapol$ gfortran -v
Usando especificaciones internas.
COLLECT_GCC=gfortran
COLLECT_LTO_WRAPPER=/usr/local/gcc-6.3.0/libexec/gcc/x86_64-apple-darwin16.5.0/6.3.0/lto-wrapper
Objetivo: x86_64-apple-darwin16.5.0
Configurado con: ../configure --prefix=/usr/local/gcc-6.3.0 --enable-checking=release
--with-gmp=/usr/local/Cellar/gmp/ --with-mpfr=/usr/local/Cellar/mpfr/
--with-mpc=/usr/local/Cellar/libmpc/ --enable-languages=c,c++,fortran
--with-isl=/usr/local/Cellar/isl/ --program-suffix=-6.3.0
Modelo de hilos: posix
gcc versión 6.3.0 (GCC)
```

both with the same (unsuccess) result.

Any idea?

Thank you for your support.

Regards,

Hi Hector,

This issue was fixed in the mar17 release (hot fixes), but not yet in the master branch.
I was not able to reproduce your problem with the same tools versions.

Have you tried to download the tarball with mar17 from GitHub again and to do a fresh

installation?

Best regards,
Dima

Hi Dmytro,

thank you very much for the tip. It's working now with a fresh mar17.

*** End installation of external packages without Errors***

Best regards,
