when I login the farm and the .bashrc is automatically sourced, it came out like this:

```
xsong@lxbk0198:/lustre/nyx/panda/songxy/pandaroot/buildPanda$ source config.sh
```

```
System during compilation: Debian GNU/Linux 8.7 (jessie)
```

```
      x86_64
```

```
System now      : Debian GNU/Linux 8.8 (jessie)
```

```
      x86_64
```

```
You try to run the software on a different  
linux flavour than it was compiled on.
```

```
This is normaly a serious error, so we stop  
the execution at this point.
```

```
If you know what you do you can change the  
config.sh script to bypass this security issue.
```

is there anything wrong?

It seems at GSI they have upgraded the OS, and now your "old" pandaroot installation is not compatible anymore (it should be, but to be safe the compiler gives this error). The suggestion is to compile pandaroot again in a new empty build directory.

Hi,

Yes, you need to run cmake and maka again. This happened even to our desktop systems.

Cheers!

Thanks Ralf and Stefano. I re-compiled it and it's solved now.
