View Forum Message <> Reply to Message

Dear colleagues,

I have problems with PandaRoot installation. I have installed Fairsoft version may18, FairRoot version 17.10 (17.10b wasn't found)
and tried PandaRoot version dec17 (dec17p2 wasn't found during svn copying). During the compilation with make -j4 I've got the
errors:

....
-- Installing: /home/anna/WORK/PandaRoot/fairsoft_may18/pandaroot_dec17/buildPanda/lib/cmake/Vc/OptimizeForArchitecture.cmake
-- Installing: /home/anna/WORK/PandaRoot/fairsoft_may18/pandaroot_dec17/buildPanda/lib/cmake/Vc/FindVc.cmake
[37%] Completed 'vc'
[37%] Built target vc
Makefile:140: runtime error prescription for the purpose «all»
make: *** [all] Error 2

What could be the reason?

Thank you in advance,
Anna

View Forum Message <> Reply to Message

Could you please re-run the compilation without the option -j4. So just make.
And then copy the lines with the error message. In the listing before the concrete error message is missing.

Cheers,

Tobias

Yes, that was v-17.10, as written in tutorial. With FairRoot v18.0.1 a have quite another picture with installation of PandaRoot dec17:

anna:~/WORK/PandaRoot/fairsoft_may18/pandaroot_dec17/buildPanda$ cmake ../
-- The C compiler identification is GNU 6.4.0

Dear Tobias,

again I'm having problems with PandaRoot installation (with FairSoft may18). I tryed to install this time version dec18. Following the tutorial I wrote:
svn co https://subversion.gsi.de/fairroot/pandaroot/release/dec18p1 pandaroot_dec18p1
And have got svn: E170000: URL
'https://subversion.gsi.de/fairroot/pandaroot/release/dec18p1' doesn't exist !!!

Then I tryed supposed that stable is the last version:
svn co https://subversion.gsi.de/fairroot/pandaroot/stable pandaroot_dec18p1

And finally got:

...ok ...

Fetching external item into 'pandaroot_dec18p1/fairtools':
A   pandaroot_dec18p1/fairtools/FairLogger.cxx
A   pandaroot_dec18p1/fairtools/FairToolsLinkDef.h
A   pandaroot_dec18p1/fairtools/FairLogger.h
A   pandaroot_dec18p1/fairtools/CMakeLists.txt
Checked out external at revision 30295.

svn: warning: W205011: Error handling externals definition for 'pandaroot_dec18p1/genfit':

Dear Anna,

PandaRoot has switched from SVN to git. Therefore it is not possible to download it anlyonger via SVN.

Please follow: https://panda-wiki.gsi.de/foswiki/bin/view/Computing/PandaRootInstallGit
or (if you plan to develop for PandaRoot):
https://panda-wiki.gsi.de/foswiki/bin/view/Computing/PandaRootInstallWit hGit

I hope that these descriptions help you with your installations.

Cheers,

Tobias

Dear Tobias,

Thank you for your answer. I tryed to use Git. But it asks for a username and password.
I requested the password via the https://pandaatfair.githost.io/users/sign_in. But didn't got the reply. Could you, please, help me?

Best regards,
Anna

Dear Anna,

Your FairRoot seems to be absent.
Please double-check that you have set both, SIMPATH and FIARROOTPATH, correctly. These folders should contain the installed libraries, binaries and headers of FairSoft and FairRoot, respectively.

Cheers!
Ralf

Subject: Re: Error in PandaRootdec17 installation
Posted by Anna Skachkova on Fri, 08 Feb 2019 12:03:42 GMT
View Forum Message <> Reply to Message

Dear colleagues,

I have redone all the installation procedure form the very beginning and got the same results. FairSoft and FairRoot were installed without errors/
All the paths seems to be correct:

anna:~/WORK/PandaRoot/fairsoft_may18/pandaroot_dec18/buildPanda$ echo $SIMPATH
/home/anna/WORK/PandaRoot/fairsoft_may18/buildFairSoft/
anna:~/WORK/PandaRoot/fairsoft_may18/pandaroot_dec18/buildPanda$ echo $FAIRROOTPATH
/home/anna/WORK/PandaRoot/fairsoft_may18/installFairRoot-18.0.4/
anna:~/WORK/PandaRoot/fairsoft_may18/pandaroot_dec18/buildPanda$ echo $CMake
/home/anna/WORK/PandaRoot/fairsoft_may18/buildFairSoft/bin

I do not understand well the statement:
Add the installation prefix of "FairRoot" to CMAKE_PREFIX_PATH or set
"FairRoot_DIR" to a directory containing one of the above files. If
"FairRoot" provides a separate development package or SDK, be sure it has

been installed.

What exactly should I do?

During my installation I used:

cmake -DCMAKE_INSTALL_PREFIX=/home/anna/WORK/PandaRoot/fairsoft_may18/installFairRoot-v18.0.4 /home/anna/WORK/PandaRoot/fairsoft_may18/FairRoot-v18.0.4
instead of
cmake -DCMAKE_INSTALL_PREFIX=~/fairsoft_may18/installFairRoot-v18.0.4 ~/fairsoft_may18/FairRoot-v18.0.4

because -DCMAKE_INSTALL_PREFIX=~/fairsoft_may18/installFairRoot-v18.0.4 didn't work. May be this way was wrong?

The $SIMPATH and $FAIRROTPATH directories contain correspondingly:
anna:~/WORK/PandaRoot/fairsoft_may18/buildFairSoft$ ls $SIMPATH
bin DDS_env.sh etc include lib lib64 LICENSE plugins ReleaseNotes.md share tests tutorials

anna:~/WORK/PandaRoot/fairsoft_may18$ echo $FAIRROOTPATH
/home/anna/WORK/PandaRoot/fairsoft_may18/installFairRoot-18.0.4/
anna:~/WORK/PandaRoot/fairsoft_may18$ cd installFairRoot-v18.0.4/
anna:~/WORK/PandaRoot/fairsoft_may18/installFairRoot-v18.0.4$ ls
bin include lib share

strange situation that the command cd $FAIRROOTPATH doesn't work:
bash: cd: /home/anna/WORK/PandaRoot/fairsoft_may18/installFairRoot-18.0.4/: No such file or directory
while cd $SIMPATH works and
/home/anna/WORK/PandaRoot/fairsoft_may18/installFairRoot-18.0.4/ exists in reality.

May be this could also be the reason of problems. What could this cause?

Please, give me some hints.

Thank you in advance,
best regards,
Anna

Is it an accident that you installled FairRoot into:
/home/anna/WORK/PandaRoot/fairsoft_may18/installFairRoot-v18.0.4/
while your FAIRROOTPATH is set to:
/home/anna/WORK/PandaRoot/fairsoft_may18/installFairRoot-18.0.4/
which is different in lacking 'v'?
Can you do:
export
FAIRROOTPATH=/home/anna/WORK/PandaRoot/fairsoft_may18/installFairRoot-v18.0.4/
and try again?
