FairSoft Installation failed on CentOS7

Installing fairsoft\_jun19.  
Did not reach the message "\*\*\*\* End installation...without Errors\*\*\*\*" (per instructions) but instead:

```
[...]  
-- Installing: /home/Panda/fairsoft_jun19/build/share/HepMC/examples/pythia8/config.csh  
-- Installing: /home/Panda/fairsoft_jun19/build/share/HepMC/examples/pythia8/config.sh  
*** hepmc compiled successfully ***

Why do you try to install FairSoft jun19?

You should go either with nov20 or apr21.

Nevertheless it might be that the Pythia8 server is down. I at least had that problem today.

Cheers,

Tobias

=="it might be that the Pythia8 server is down. I at least had that problem today"

I retried again later in the day with no change. Is the Pythia8 server down?

=="Why do you try to install FairSoft jun19?"

I was following the PandaRoot Installation guide published on Foswiki. However, per your suggestion, I went with "nov20" and followed the instructions in the 'legacy' folder. This also failed. See output below and enclosed log.

For current purposes, assistance installing either "jun19" or "nov20" would be appreciated.

```
[root@localhost fairsoft_nov20]# cmake -S /home/Panda/fairsoft_nov20 -B
/home/Panda/fairsoft_nov20/build -C /home/Panda/fairsoft_nov20/FairSoftConfig.cmake

Which compiler are you using?

Hi,

if you are using the default compiler on CentOS 7 you will not be able to install FairSoft nov20 since this version needs at least C++14 which isn't supported by gcc 4.8.5.

Redhat provides so called developer toolsets which allow to use newer software packages. Please check if you can use the devtoolset-7 which includes gcc 7.3.1 which is able to compile FairSoft nov20. You enable the toolset with the following command.

```
> source scl_source enable devtoolset-7
```

They moved pythia8 to separate domain. It's <https://pythia.org/releases/> now.

One should update the config file for that.

---

I already wrote a ticket for FairSoft. Usually they fix it pretty fast.

Thank you. Not sure if I implemented this solution correctly, but this also failed. Output below and log attached.

[...]

```
[root@localhost fairsoft_nov20]# source scl_source enable devtoolset-7  
[root@localhost fairsoft_nov20]# cmake --build /home/Panda/fairsoft_nov20/build
```
