

Hi,

Attempt to install pandaroot 12.0.0 on CentOS7 failed.

Software combination:

fairsoft\_nov20\_patches (install successful)  
FairRoot-v18.6 (install successful)  
pandaroot v12.0.0 (install failed)

Below is sample output. (Complete output enclosed.)

Please let me know what I am doing wrong.

Sincerely,  
Mark

Subject: Re: PandaRoot 12.0.0 installation fails on CentOS7  
Posted by [Mark Lattery](#) on Sun, 27 Jun 2021 19:51:38 GMT  
[View Forum Message](#) <> [Reply to Message](#)

---

Just an update:

After trying numerous combination of software, the only one that worked for me on Cent OS7 was:

```
fairsoft_nov20_patches
FairRoot-v18.6
PandaRoot v12.0.2
```

However, the event generator/simulation software does not seem to be working. See sample output below. (Complete output is enclosed.)

Still, I was able to copy simulation \*.root files from a computer with an older version of the software and the analysis code seems to be working.

Dear Mark,  
here we have the problem with the additional #include <FairFilteredPrimaryGenerator.h> in  
tut\_sim.C.

Remove it and try it again.

Cheers,

Tobias
